To give effect to this requirement, bidders are required to submit a partnership / subcontracting proposal detailing the portion of work to be outsourced, level of involvement of the black owned partner and where relevant, submit a consolidated B-BBEE scorecard in-line with the provisions of the PPPFA Regulations which will be considered as part of the B-BBEE scoring listed in 13.3.

## **SECTION 2: SPECIFIC CONDITIONS OF BID**

**SECTION 3: FUNCTIONAL REQUIREMENTS SPECIFICATION**

## **SECTION 3: FUNCTIONAL REQUIREMENTS SPECIFICATION**

---

### **1. Special instructions to bidders**

All documents as indicated must be supplied as part of the bid response.
- 1.3 Failure to comply with Mandatory Requirements may lead to the bidder being disqualified.

### **2. Purpose**

---

The IDC administers the Industrial Policy Support Fund (IPSF) on behalf of the Department of Trade and Industry ("**the dti**"). This tender is therefore facilitated by the IDC on behalf of **the dti**.

The Pharmaceuticals sector desk within the Department of Trade and Industry (the dti) seeks the services of independent consultants with extensive and proven experience and knowledge of

- a) the South African veterinary pharmaceutical industry and its participants,
- b) the veterinary subsector including research, development, clinical trials, manufacturing and regulatory requirements worldwide,
- c) the potential of South African exports because the demand of South Africa is not large enough to justify building commercial manufacturing facilities for South Africa alone and the region has similar problems in terms of veterinary challenges and access to veterinary products and
- d) all relevant policies, legislation, regulations, etc that could impact the development of the veterinary pharmaceutical sector would enable a comprehensive analysis and compilation of a sector development plan that considers South Africa's relative global position with respect to developing the local industry and where South Africa should position itself in terms of the global opportunities and regional value chains. This must also include a review of the research and development (R&D), clinical trial and commercial manufacturing opportunities for SA where substantial investment is currently being made with clear benefit to the commercial and small-scale/subsistence farming sector.

The landscape analysis and proposed implementation plan/road map plan would identify key priority areas/key action programmes (KAP's) throughout the veterinary pharmaceutical value chain in South Africa that would require intervention. These KAP's would then be incorporated into the key strategic implementation plans of the dti, DOH, DAFF and the DST, etc. such as IPAP.

### 3. Background Information

---

In 2014, the value of the global animal veterinary market was estimated to be approximately \$24 billion. The annual growth in this sector is around 4.5%. The Compound Annual Growth Rate (CAGR) between 2004 and 2014 was in excess of 7%. The growth in veterinary markets, domestically and internationally, is driven by a variety of factors ranging from: increased demand for meat and other livestock products, especially in emerging markets; the need for disease control, for both indigenous and possible trans-boundary diseases; increased human, animal and food transport, which brings about increased disease risk; climatic change and increased productivity, which may result in adverse environmental impacts in terms of livestock products; new molecular techniques are driving the development of safer, more effective vaccines for effective disease control; approximately 60% of emerging diseases are zoonotic in nature and arise in animals thereby having direct bearing on control of pathogens that may affect livestock for consumption.

The domestic veterinary market is dominated by the companion animal market and food animal products; with very few companies involved in manufacture, and the remainder of the market being serviced by multinationals with no manufacture footprint. Entities such as Onderstepoort Biologics Products (OBP), Deltamune, PharmaQ, Chemical Process Technologies (CPT) and Biotech labs are engaged in manufacture activities. The majority of industry participants (product developers and distributors) are voluntary members of SAAHA (South African Animal Health Association). The bulk of products currently sold in South Africa are vaccines (29%), antimicrobial (22%) and ectoparasiticides (19.9%) making up 71% of the market and is indicative of capacity that should be developed locally.

The bulk of exports from South Africa are destined for the African continent and the top 5 countries include Namibia, Zimbabwe, Botswana, Zambia and Swaziland (Quantec 2017) and also comprises mostly vaccines. Increased vaccine exports into the region could possibly be attributed to the import requirement calling for the vaccination of cattle. The bulk of imports are from the United States of America and European countries (Netherlands, France, Germany), with South America (Uruguay) also managing to gain market share in South Africa. The levels of imports from these two regions have also gradually increased from 2006-2016. Unlike the trend in pharmaceuticals for human consumption, an insignificant amount of imports originates from Asia.

The Department of Agriculture, Forestry and Fisheries (DAFF) is the custodian of the Veterinary Strategy for South Africa. This strategy provides a broad framework for the fulfilment of the national and provincial departments responsibilities to guarantee citizens of South Africa “the right to have access to sufficient and safe food of animal origin and that “the State must take reasonable legislative and other measures, within its available resources, to achieve the progressive realisation of each of these rights. The strategy therefore is aligned with the New Growth Path (NGP), the National Development Plan (NDP) and Industrial Policy Action Plan (IPAP) through the Agriculture Policy Action Plan (APAP), which seeks to assist in the achievement of decent employment through inclusive growth. This strategy’s outputs will strengthen South Africa’s position on the continent in terms of veterinary capacity. Another development seeking to strengthen veterinary capacity was the establishment of Operation Phakhisa, with DAFF and National Animal

Health Forum (NAHF) co-ordinating all related activities. The overall goal is to identify challenges within this industry and formulation of solutions to overcome problems but also improve overall status within the animal health sector.

South Africa currently has one university with a veterinary faculty, namely the University of Pretoria with Fort Hare due to host another as soon the accreditation process is concluded. Animal disease (zoonotic) research also takes place within other tertiary institutes, e.g. Stellenbosch University and University of Cape. The latest trends in the veterinary sector lean towards the development of innovative products that will stimulate the innate and adaptive immune systems, whilst the need for new treatments for chronic diseases, especially in companion animals, are growing needs within the market.

Other animal health related activities undertaken recently include the review of Technology Innovation Agency (TIA)'s, Animal Health Technology Innovation Program (previously known as the Tshwane Animal Health Cluster (AHC)) which was aimed at stimulating and intensifying technology innovation within the animal health sector. The Department of Science and Technology (DST) is also in the process of identifying animal disease priority areas in relation to the geographic footprint of potential successful products from the TIA AHC.

#### **4. Problem Statement**

---

The South African veterinary pharmaceutical industry is characterised by imports. Animal diseases dominant on the African continent are not always priority for development by multinational pharmaceutical companies with a veterinary interest. Limited manufacture is taking place domestically and this capacity cannot fulfil the current market needs within the country and the African continent as whole. Interventions are required to address growing veterinary needs of the country and region and develop capacity to create domestic solutions. The current manufacture portfolio in South Africa does not extend to new products but rather meeting existing needs with effective but dated solutions. The Pharmaceutical and Medical Devices desk has identified the lack of growth and development within this sector as an opportunity to enhance the domestic industry and explore opportunities to supply to local demands and continental needs. The continent offers a good offset point as the majority of exports are aimed at Africa, in particular the SADC region.

#### **5. Objectives**

---

The overall objective of this project is the development of a sector development and implementation plan to support a sustainable veterinary pharmaceutical industry in South Africa. This will be informed by establishing a baseline of the manufacture of veterinary pharmaceuticals and related activities in South Africa to be used as a basis for the development of initiatives (policy instruments, incentives, etc.) to increase and improve the manufacturing capacity, ranging from conversion of successfully proven research and development for South African and regional-specific diseases.

Furthermore, the goal would be to increase local manufacturing capacity for products used in large volumes to reduce the reliance on imports and promote import substitution. Increased availability of locally manufactured products will promote export opportunities to neighbouring countries and other regions, with similar disease profiles as South Africa. In addition, the identification of current pharmaceutical manufacture capacity will enable an audit of veterinary infrastructure, both in the public and private sectors.

Formulation of an industry roadmap indicating development opportunities within this sub-sector, including research and development, regulatory aspects (challenges and constraints); commercialisation opportunities and associated support (incentives, policies, etc.) to be revised, developed and implemented at government level to promote and stimulate this sub-sector and enable access to various products (vaccines and other biotechnology products) for both small and large-scale manufacturers and users.

## **6. Methodology**

---

The Service Provider is expected to clearly stipulate the approach and provide a step-by-step explanation of the proposed process to reach the end result of this requirement.

It will be imperative for the Service Provider to outline in the methodology why a particular method was chosen, as well as what the pros, cons and risk factors are.

The use of appropriate research techniques or approaches based on the need to involve and achieve the highest participation rate possible of individual companies'/ industry associations into the process.

The service provider will also identify stakeholders to engage in the process.

Proposed methodologies should include amongst other

- Qualitative and quantitative techniques to be used
- Desktop and first hand research approach
- Stakeholder facilitation and engagement model

## **7. Scope of Work**

---

The appointed service provider is expected to comply with the following:

The global veterinary pharmaceutical sector comprises the multiple and inter-linked value chains that cut across many product and process types. It is required that the sector plan development process follows a value chain analysis approach (as opposed to a sub-sectoral analysis approach) to understand demand drivers of important value chains as well as associated growth inhibitors/disablers or enablers.

The service provider is expected to execute the following scope of work and will be required to produce:

a. Inception report – within the first 3 weeks of appointment, a detailed inception report must be submitted to the project management team (PMT) responsible for overseeing the project. The PMT may require a meeting with the service provider to engage with the content of the inception report in more detail. The inception report must include:

- o Project objective
- o Project approach and methodology
- o Activities, including proposed interview schedule
- o Milestones and deliverables
- o Detailed project plan

b. Interim reports – for each phase of the project, an interim report must be submitted which sets out key findings and implications, and clarifies the approach, priorities and desired outcomes for the remainder of the project.

c. Project status reports – timely submission of periodic status reports to the PMT in line with timeframes to be defined at the inception of the project. Based on the status reports, the PMT may request other ad hoc status meetings to provide specific guidance / input to the project.

d. Final veterinary pharmaceutical sector development plan and implementation strategy – produce a final sector development and implementation plan report, which sets out the analysis, implications, sector development framework, and deployment recommendations. Outcomes must be aligned with the key stakeholders in collaboration with the PMT and the sector development plan updated in line with inputs provided by stakeholders.

e. It is expected that the service provider will engage extensively with public and private industry stakeholders in the preparation of the reports required. the dti will be responsible for consulting the public on the introduction of or changes to any government interventions that may flow from the deliverables.

f. Ad-hoc support on the implementation of the sector development plan for a period of six months.

## 8. Deliverables

The service provider will be required to produce:

- 1 This Standard Bidding Document (SBD) must form part of all bids<sup>1</sup> invited.
- 2 Section 4 (1) (b) (iii) of the Competition Act No. 89 of 1998, as amended, prohibits an agreement between, or concerted practice by, firms, or a decision by an association of firms, if it is between parties in a horizontal relationship and if it involves collusive bidding (or bid rigging).<sup>2</sup> Collusive bidding is a *pe se* prohibition meaning that it cannot be justified under any grounds.
- 3 Treasury Regulation 16A9 prescribes that accounting officers and accounting authorities must take all reasonable steps to prevent abuse of the supply chain management system and authorizes accounting officers and accounting authorities to:
  - a. disregard the bid of any bidder if that bidder, or any of its directors have abused the institution's supply chain management system and or committed fraud or any other improper conduct in relation to such system.
  - b. cancel a contract awarded to a supplier of goods and services if the supplier committed any corrupt or fraudulent act during the bidding process or the execution of that contract.
- 4 This SBD serves as a certificate of declaration that would be used by institutions to ensure that, when bids are considered, reasonable steps are taken to prevent any form of bid-rigging.
- 5 In order to give effect to the above, the attached Certificate of Bid Determination (SBD 9) must be completed and submitted with the bid:

---

<sup>1</sup> Includes price quotations, advertised competitive bids, limited bids and proposals.

<sup>2</sup> Bid rigging (or collusive bidding) occurs when businesses, that would otherwise be expected to compete, secretly conspire to raise prices or lower the quality of goods and / or services for purchasers who wish to acquire goods and / or services through a bidding process. Bid rigging is, therefore, an agreement between competitors not to compete.
